meeting notes

prepared by	Alyce Taylor
meeting subject	Elf Farm Supplies (EFS) Community Liaison Committee (CLC)
location	Windsor High School
date and time of meeting	23 November 2016, 6.00pm to 8.00pm - Site visit: 6.00pm to 7.00pm - Meeting: 7.15pm to 8.00pm.
attendees	Chair - Nicola Wass Members present — David Tolson, Trevor Wilson, Michael Hardman, Steve Bonanno, Emmanuel Isbester, Brenda McDonough, Bill Sneddon, Jennifer Hawken, Lyn Creamer. Notes - Alyce Taylor Apologies - Danielle Wheeler.
distribution	All CLC members

Welcome and apologies

Item No.	Business	Action	Date
1	Nicola welcomed the CLC members and gave the meeting apologies. Nicola expressed on behalf of the Hawkesbury Environment Network representative her appreciation for the experience of working together with the CLC members.		

Review of previous meeting notes

Item No.	Business	Action	Date
2	Nicola said that the previous meeting notes had been distributed, confirmed and published on the CLC website. Nicola then listed the following outstanding actions from the last CLC meeting and noted that all were complete.		

Item No.	Business	Action	Date
	Straight Talk had sent out the Community Consultation Strategy PDF with the previous meeting notes		
	 Straight Talk had sent spare copies of the Construction Update One newsletter to CLC members who had requested additional copies 		
	 Straight Talk was to investigate the availability of odour maps previously presented to the CLC by The Odour Unit. Nicola stated she understands the maps form a part of EFS's DA modifications application and should be available on the Department of Planning and Environment website. 		
	 Straight Talk was to provide an analysis of odour complaints. Nicola stated that a report had been prepared and would be covered later in agenda item number 4 		
	 Straight Talk was to follow up a question from a CLC member about a second report, apparently entitled a 'Stevenson Report'. According to EFS's General Manager, this possibly refers to an environmental management review which is currently with the Department of Planning and Environment for approval. 		

Mitigation works status and next steps

Item No.	Business	Action	Date
3	The EFS representative provided a progress report on construction works that have occurred since the last CLC meeting. He stated that construction was going to plan and provide the following details.		
	 The steel structure for the raw ingredients shed is now finished. The shed should be completed and fully enclosed before Christmas 2016 		
	 On Thursday 24 November 2016, a large (concrete) pour of the tunnel floor area was to commence. This will provide the base that the pipes and spiggots will be bolted onto. Concrete reinforcements will then be laid before a final layer of concrete is placed on top 		
	All footings for the final building has been dug		

Item No.	Business	Action	Date
	Construction of the bunded areas for the chemical storage tanks has commenced, as has construction of the area where the trucks will back into to transfer chemicals onto the site		
	The hard stand area where the biofilter material will be located has been levelled and stabilised. The walls for the rear of the fan room of the six tunnels has commenced.		
	It was then outlined that in future people can keep track of the construction works through the EFS website, quarterly information sessions, the EFS updates mailing list and quarterly construction newsletters.		
	The following questions from the site visit to EFS Mulgrave facility prior to the meeting were then put to the EFS representative. All questions related to a recent fire which occurred at the EFS Mulgrave facility.		
	 Question: Were the straw bales located in an approved area for bale storage and if so is it in the approval plans? Response: The area where the bales were stored had always been marked for storing bales and was approved 		
	• Question: What will happen to the spoiled straw? Response: The EPA is still deciding how the spoiled straw can be disposed because some bales have been contaminated with fire retardant and some were burnt. There are many reuse and disposal options because the fire retardant is biodegradable. EFS has proposed options to the EPA and they will assess the category of the spoilage and where it should go. The EPA representative said that this assessment was likely to take a week and required the input of technical consultants		
	• Question: Was the amount of straw at the time of the fire normal? And what is the permissible amount of straw volume that EFS has approval to store? Response: EFS has no approved straw bale storage limit. The company tries to store only what it needs, with a little extra in case of an emergency such as a road blockage or floods, which tends to be at least a couple of weeks of stock. At the time of the fire approximately 1200 bales were being stored.		
	The CLC was then shown CCTV still images demonstrating a time-lapse of the fire starting.		
	Question: Was the fire caused by spontaneous combustion? Response: It was not. The Fire Brigade investigated and classified the fire as accidental and not arson. When this		

Item No.	Business	Action	Date
	occurs the Fire Brigade stops their investigation. However, EFS has requested the fire brigade further investigate the cause of the fire and provide guidance on how to better manage straw bale storage. The Fire Brigade is currently investigating other recent fires and is expected to have capacity to assist EFS in 2017		
	• Question: Could it have been started by one of the earlier fires that had ignited in the area on the same day? Response: Those fires started after the fire at EFS's Mulgrave facility so it is very unlikely. The EFS representative said that it could have been caused by cigarette butt although video footage shows no movement in the area 30 minutes before the fire so it is also very unlikely. EFS is checking the suppliers of their new loaders to see if they did a diesel particulate burn off at that moment, but believe that it also seems extremely unlikely. The EFS representative said that it was more likely that the fire was started by a piece of glass concentrating the heat of the sun, and that once it ignited and turned to flames the fire rapidly grew. EFS will investigate investing in thermal imaging, thermal alarming and thermal cameras. The EFS representative said that some of this equipment may have been able to detect the fire at the charred level		
	 Question: What amount of straw was destroyed? Response: Not much of the straw was destroyed but EFS are not using the straw stored at the time of the fire because although most of it wasn't burnt, most of it has been wetted. The EFS representative explained that water would have started breaking down the straw already, and could ruin the production process. Normally all bales are hard packed and so during rain water sheds off them quickly and the bales do not absorb a lot of water. In the case of the fire, the bale strings broke and the straw became loose which is why the straw has become water damaged Question: Why wasn't the straw undercover, where are the sprinklers, and are there plans to enclose the straw bale area? Response: Feedback from the Fire Brigade indicates the advantage of the straw bales being in the open. The fire lasted for seven days but had the area been enclosed it would have

Quarterly complaints report

Item No.	Business	Action	
4	Nicola referred to the Complaints Analysis Summary report distributed to attendees and apologised for a page missing in the report. Nicola noted that since November 2015 the EFS complaints line and web portal had received 112 complaints or enquires. Nicola provided a succinct explanation of the investigation process and then provided details on the types of complaints and enquires received, and the outcome of the complaint investigations.	ST to send the full Complaints Analysis Summary report to the CLC members	7.12.2016

Community issues and concerns – raw materials storage

Item No.	Business	Action	Date
5	Raw materials storage (straw bales) had been discussed under the agenda item 'Mitigation works status and next steps', see section three.		
	The EFS representative confirmed that it still planned to build a steel and concrete noise retention wall and that the straw bales would stay in their current location until this had occurred. EFS is getting advice on fire and noise factors to inform the development of the wall.		

Report on CLC feedback

Item No.	Business	Action	Date
6	Nicola referred to the Feedback Summary Report that was provided to attendees. The purpose of the report was to share the feedback provided at the last meeting		
	Nicola summarised the report by saying that feedback identified that generally everyone was satisfied with the CLC but were least satisfied with their attendance at the CLC being a good use of their time. Nicola reflected that the original intent of the CLC was to keep a watching brief on construction and that this had not occurred for most of the duration of the CLC.

Formal close of the CLC

Item No.	Business	Action	Date
7•	Nicola invited the EFS representative to provide a closing address to the CLC.	Draft meeting notes distributed to the CLC for comment	30.11.2016
	The EFS representative said he wanted to thank all CLC members, on behalf of his family and himself personally. He stated that he was thankful to CLC members for their time and contribution despite it sometimes being a difficult and frustrating process. He said that his family were passionate about the Hawkesbury, the community and agriculture. He said that his family wanted to have a positive presence in the Hawkesbury and would ensure that the upgrade of EFS's Mulgrave facility complied with all environmental conditions.		
	Nicola thanked the EFS representative and acknowledged his contribution to the CLC, particularly in relation to his calm response to difficult discussions.		
	She stated that the CLC was a valuable resource for EFS, despite being frustrating at times. She described how the CLC had given EFS the opportunity to hear directly from the community. She said that she hoped that all CLC members would continue to be involved in their community. Nicola then thanked CLC members for the unique ideas and perspectives that they brought to the meeting.	ST to raise the suggestion of CLC members could attending the upgrade	
	The mushroom representative stated that it was important to support the mushroom industry, and for EFS to get the upgrade right because many households depended on the mushroom industry for their livelihood.		
	Nicola then briefly outlined the community engagement options available to CLC members into the future. She said that CLC members could continue to be involved in the mitigation works by attending quarterly information sessions, reading the quarterly construction update and through reading website updates.		7.12.2016
	One community representative asked if the CLC could be invited to the official launch of the completed upgrade in 2018.		
	Nicola ended the meeting by officially closing the Elf Farm Supplies' Community Liaison Committee.		
	[Subsequent to the end of the meeting, Nicola realised that she had not specifically thanked the Principal of Windsor High School who had continued with the commitment made by her predecessor to		

Item No.	Business	Action	Date
	participate in the committee, make the school's library available for the meetings and arrange catering. Although Nicola did personally thank the Principal after the meeting closed, she wishes to rectify the oversight in these notes and formally thank her for her additional contribution to the CLC].
